

The background is a solid dark green color. At the top, there are stylized green leaves and branches. At the bottom, there are stylized green bushes and rolling hills. A large, white, cloud-like shape with a scalloped border is centered on the page, containing the main title and presenter information.

SURVIVOR ANALYSIS: THE IMPACT OF ADVANTAGES

Presented By:

AMY KERDOLFF

Overview

This project analyses data from seasons 11 to 48 of the United States version of the tv show Survivor.

The goal is to determine the relationship between advantages that castaways obtain and their final standing in the competition.

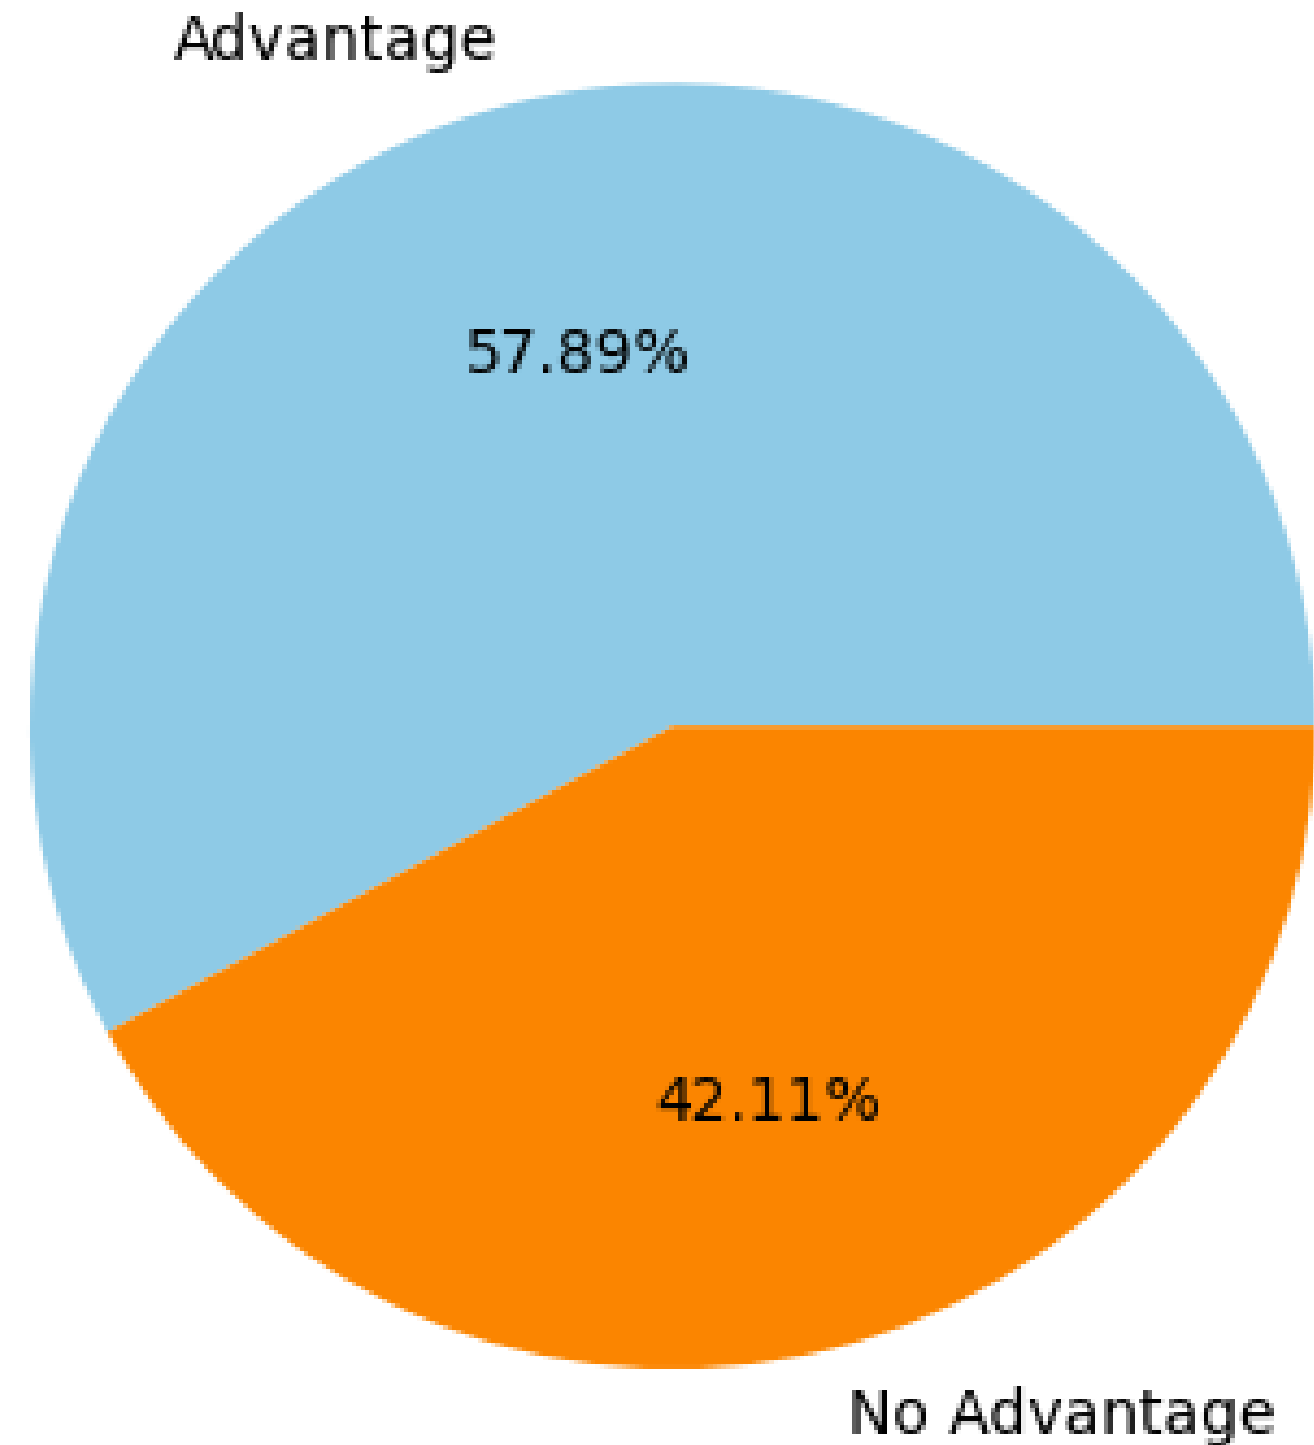

Key Findings

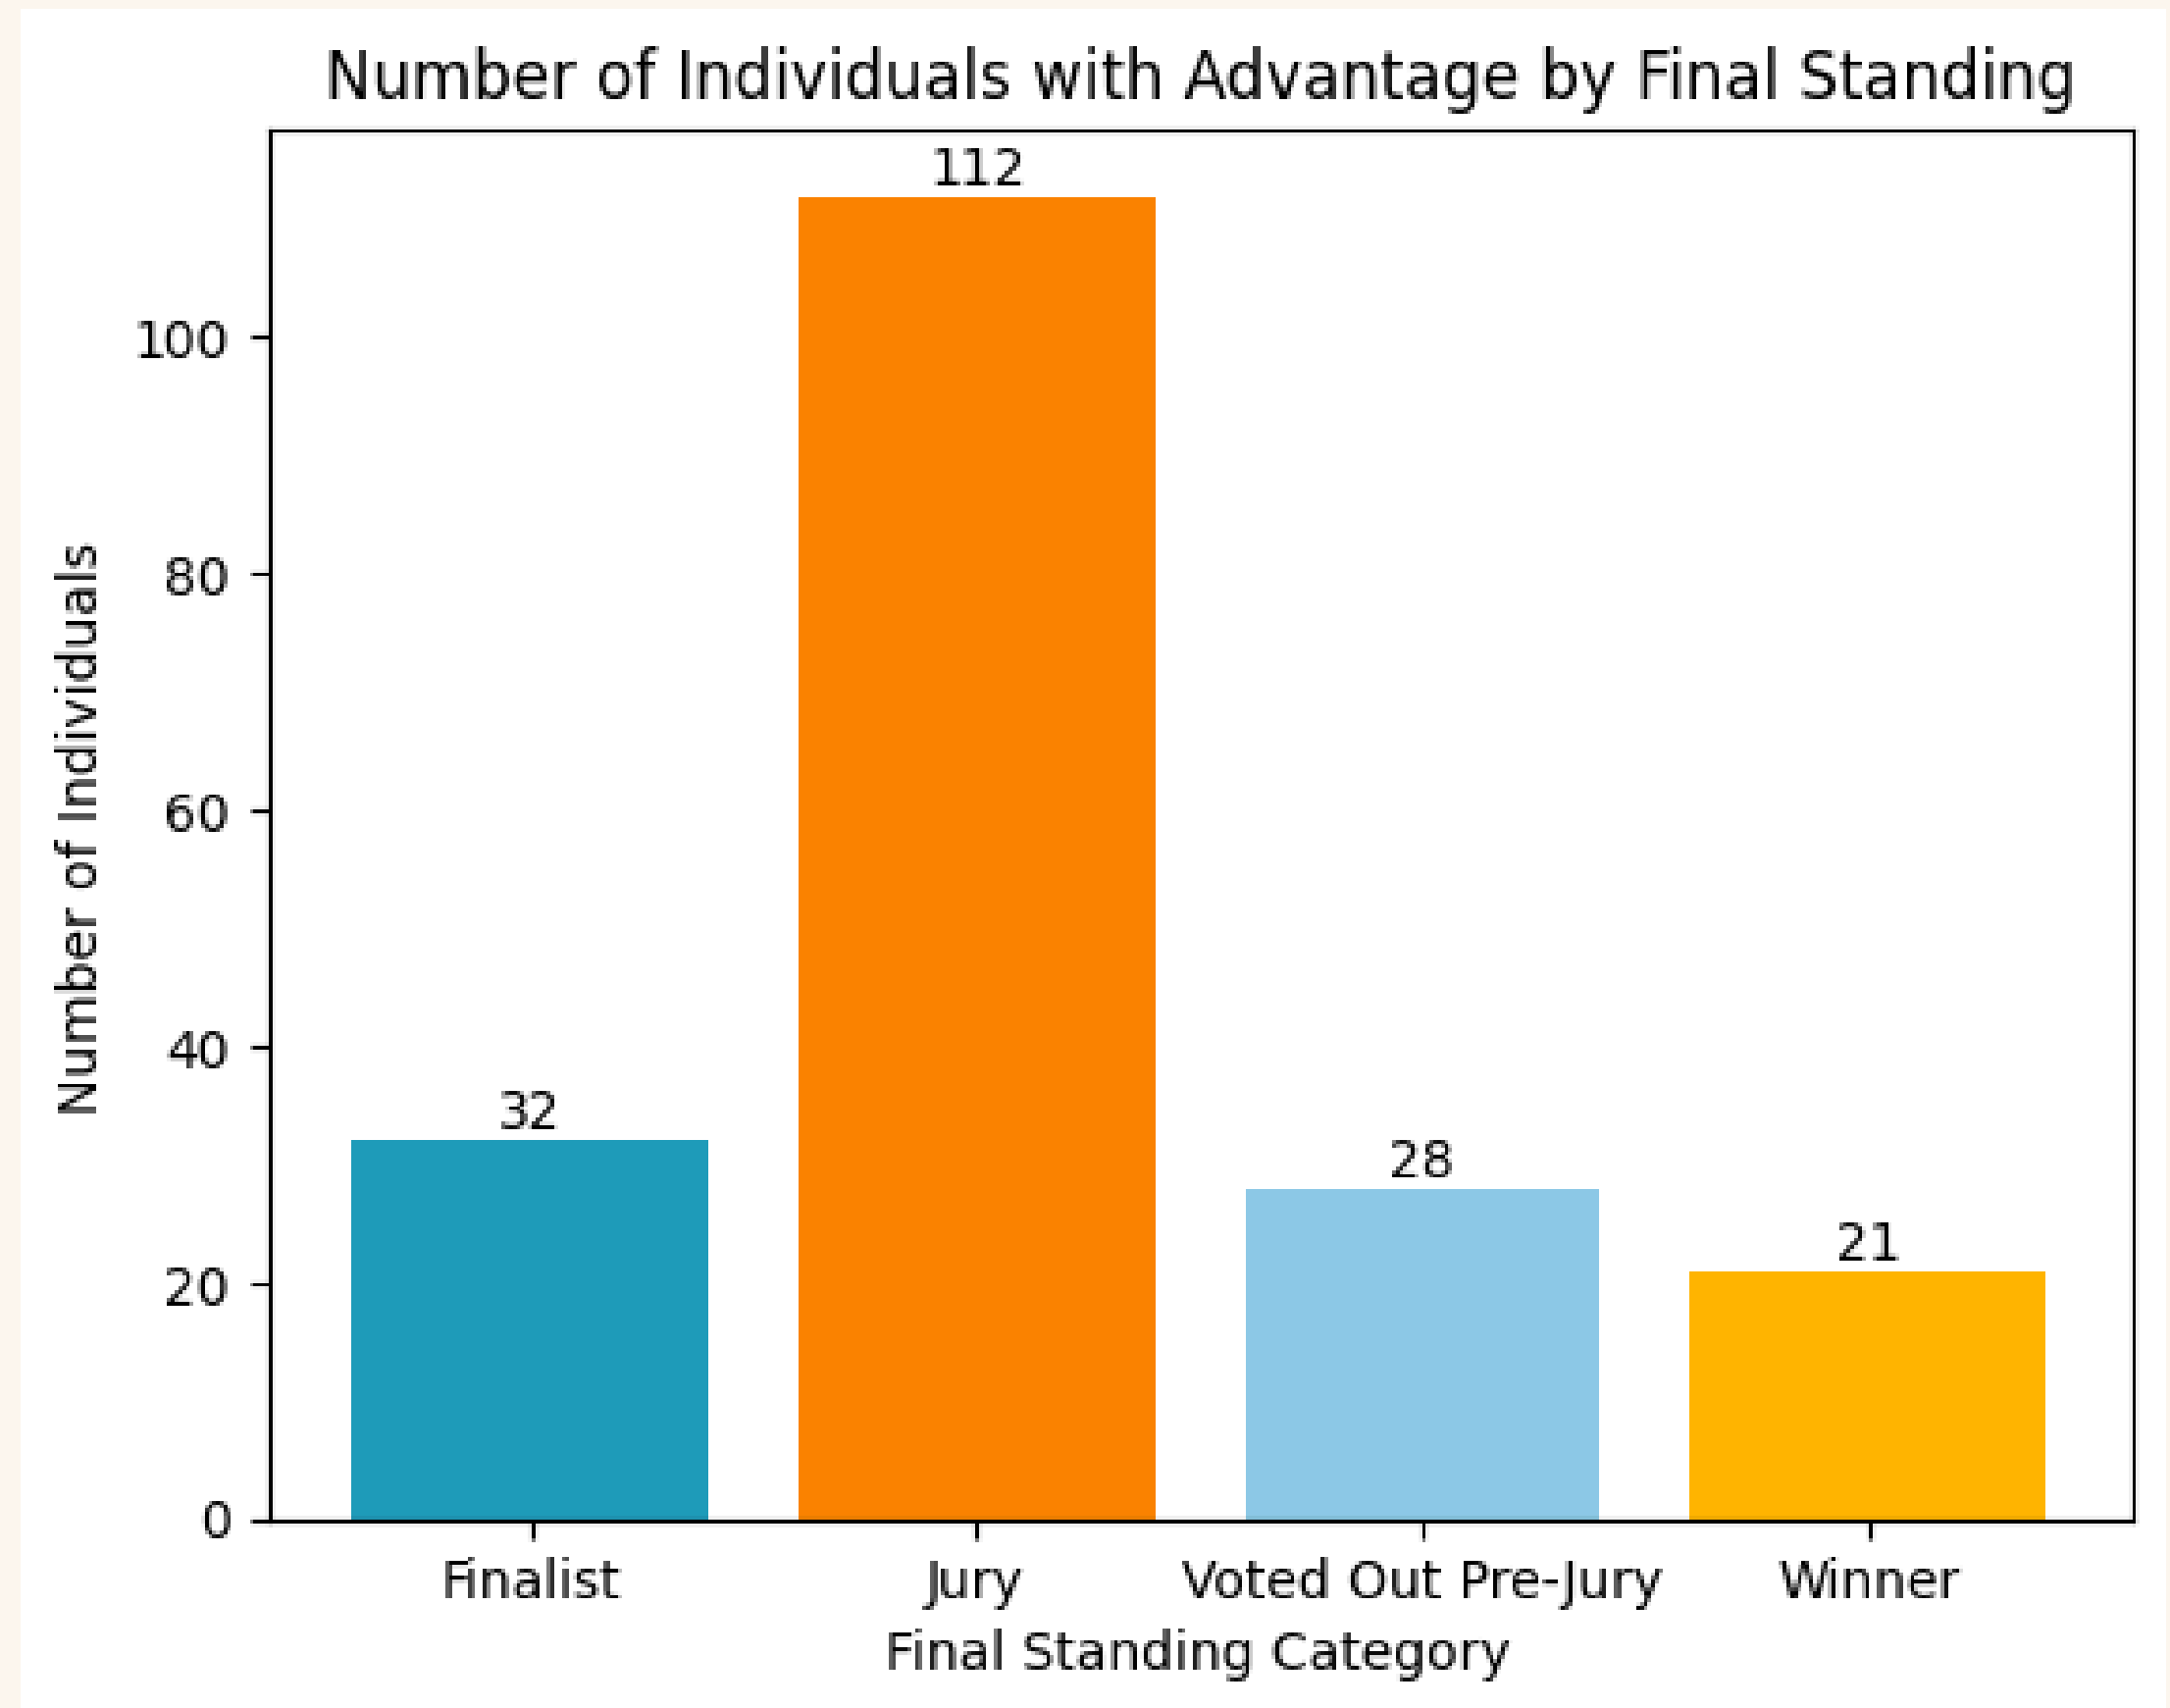

The majority of winners have been in possession of at least one advantage, but having an advantage doesn't appear to dramatically increase a player's likelihood of winning.

Percentage of Winners With or Without an Advantage

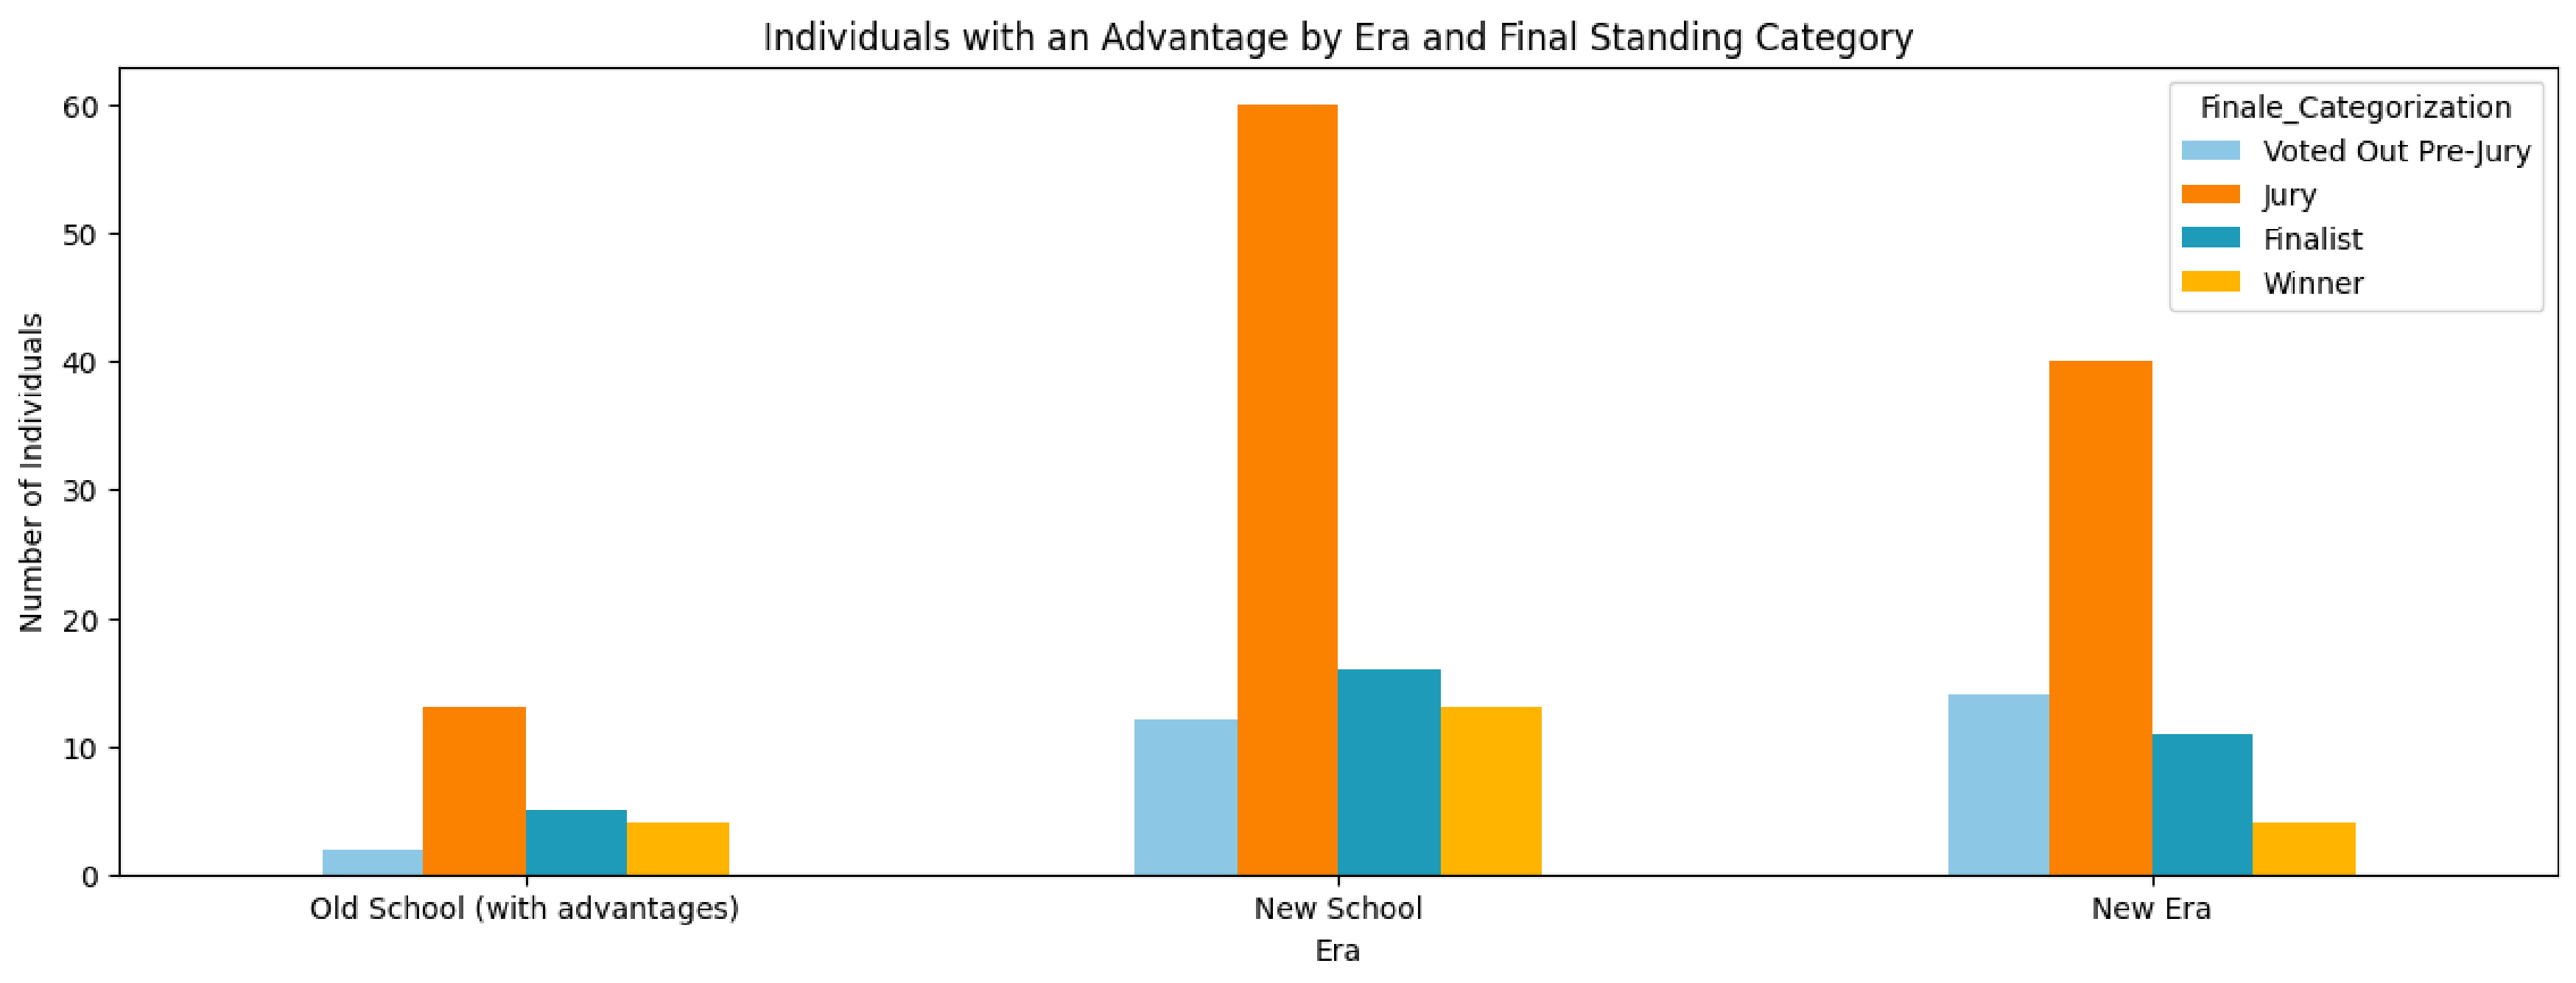

193 castaways have had advantages, with 10.88% of those individuals becoming the Sole Survivor.

It appears that advantages help people get to the merge, since the vast majority of individuals with advantages have made it to the jury or beyond.

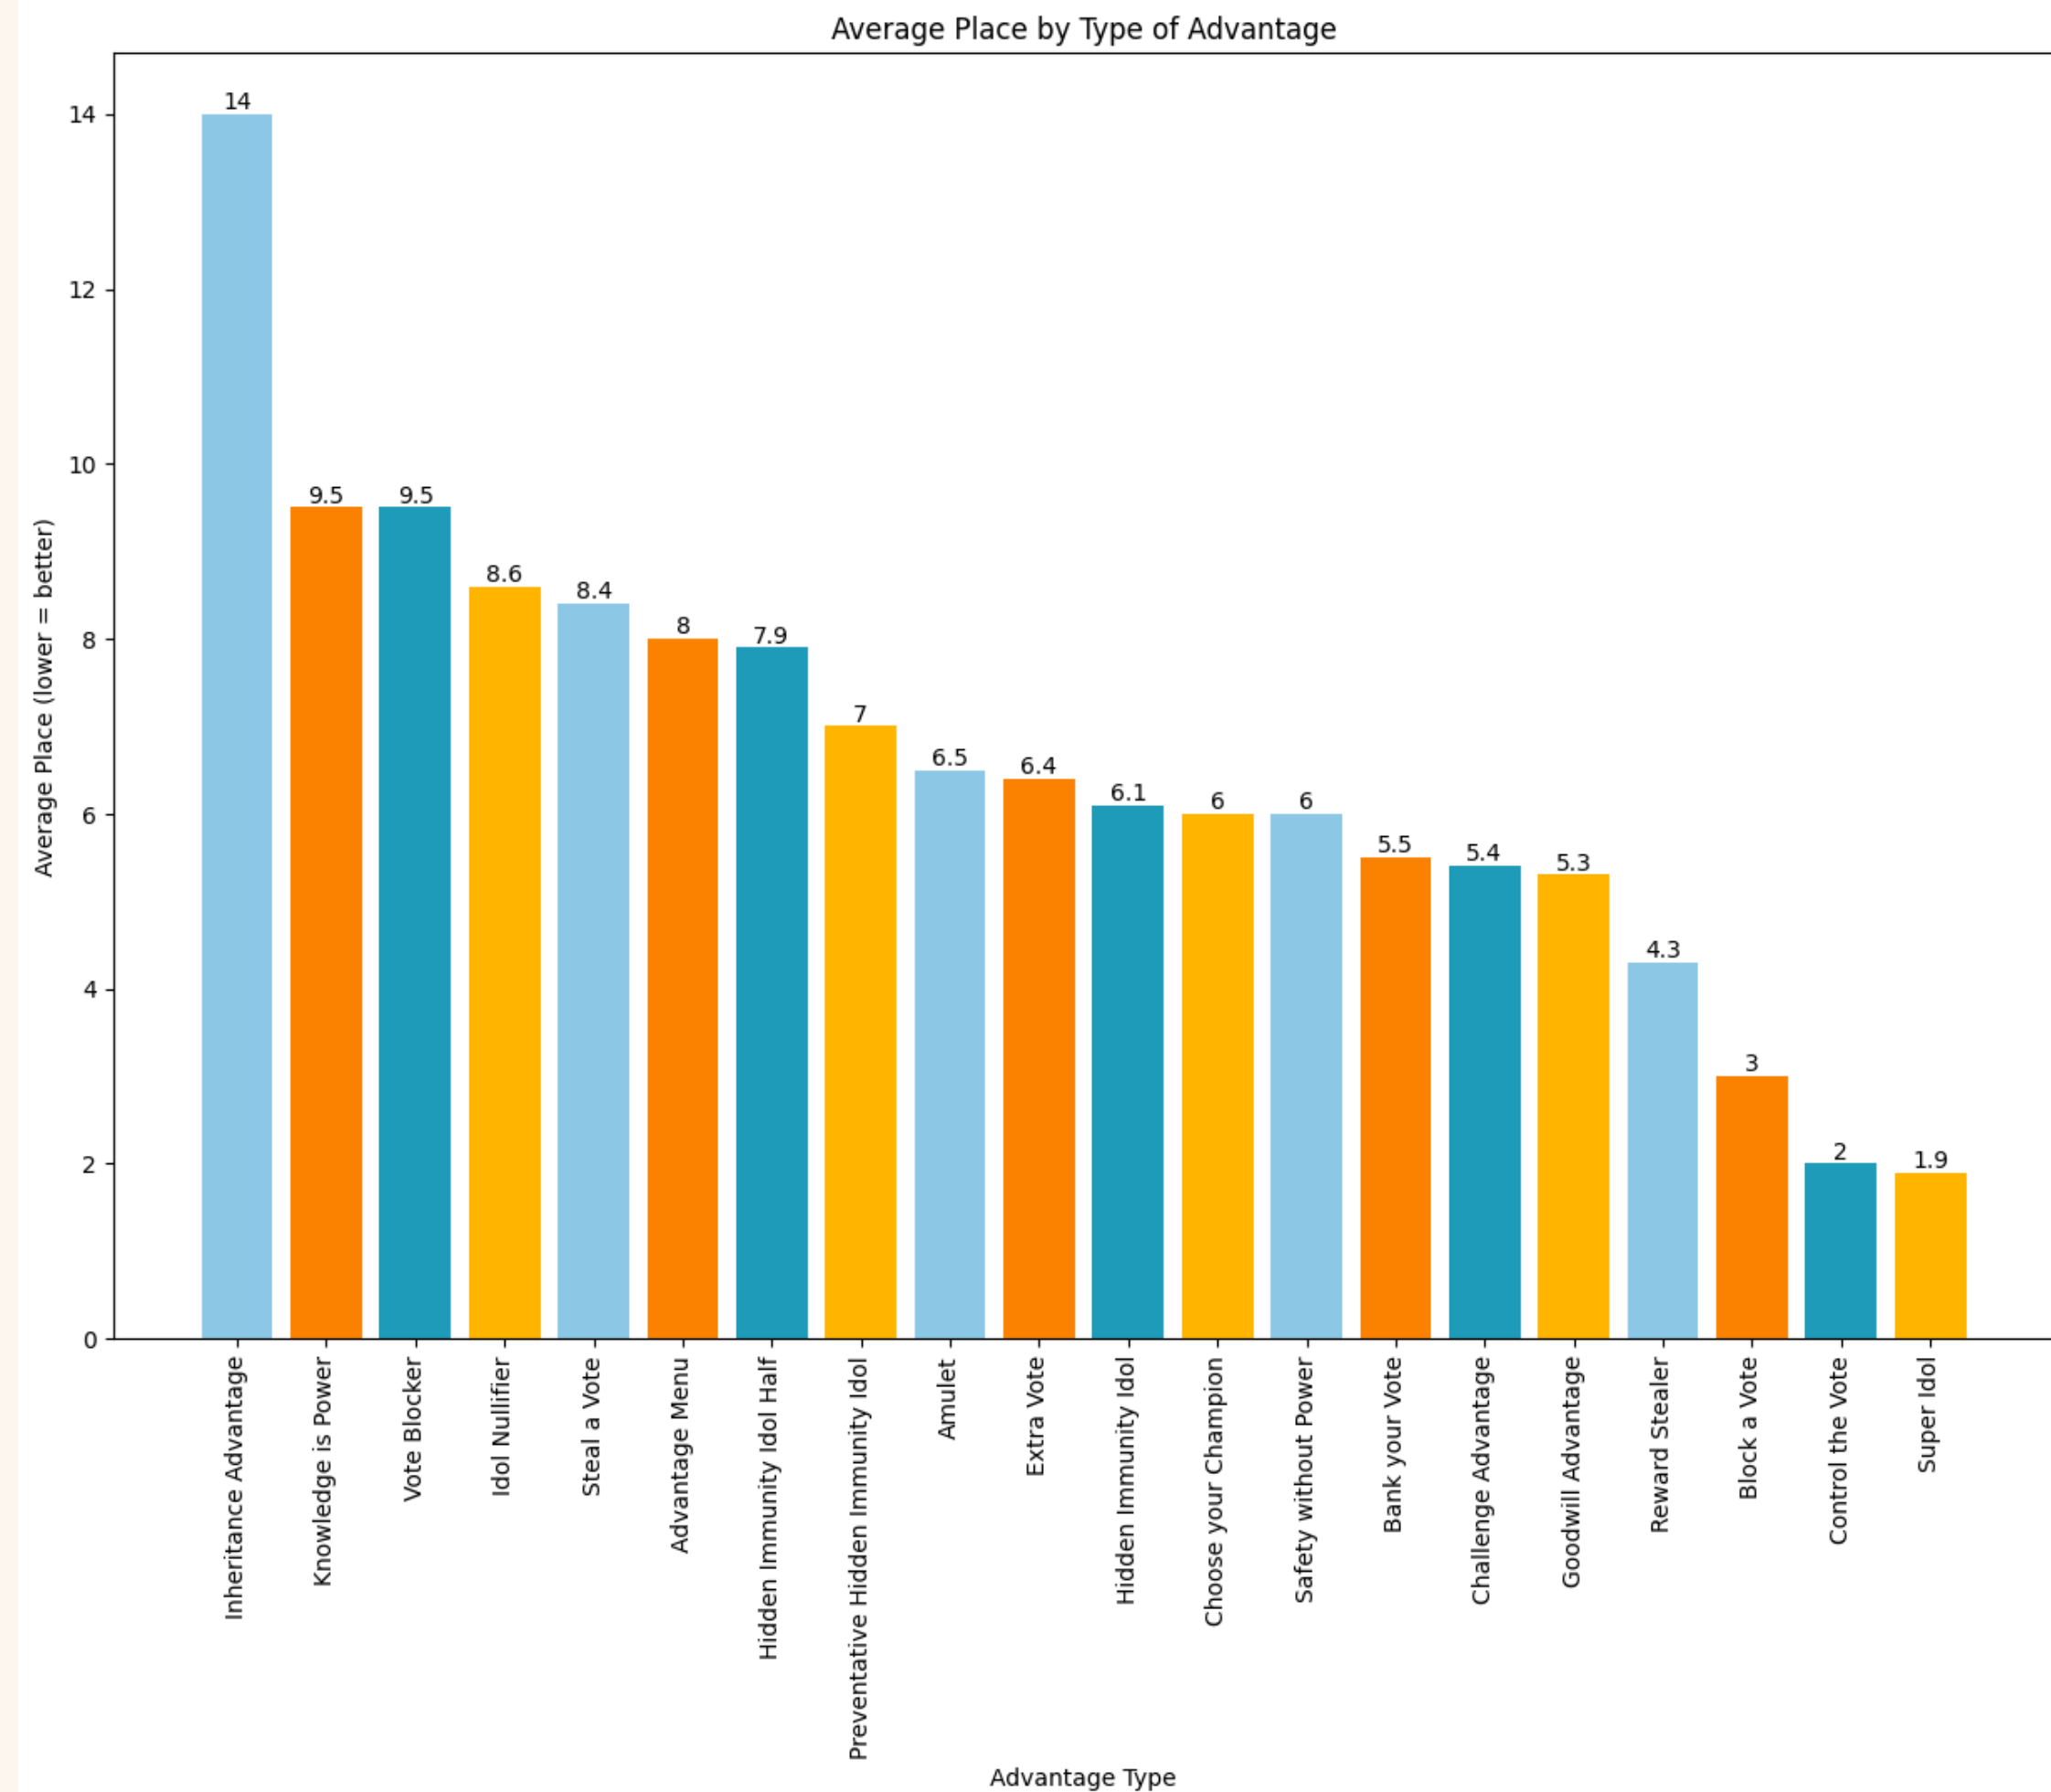

The correlation between having an advantage and a castaway's final standing is fairly consistent across seasons, but a higher percentage of individuals have been voted out pre-jury in the New Era.

Top 5 advantages that will get you furthest in the game:

1. Super Idol
2. Control the Vote
3. Block a Vote
4. Reward Stealer
5. Goodwill Advantage

The Inheritance Advantage is the only advantage with a double digit average finishing place.

There are 20 types of advantages,
but individuals who have won
have only had 6 of the types.

Everyone who has had a Block a
Vote advantage has won.

Advantage Type	Percentage of Players with Advantage Type Who Have Won
Block a Vote	100%
Super Idol	80%
Reward Stealer	50%
Hidden Immunity Idol	37%
Steal a Vote	25%
Extra Vote	18%

Limitations

- The number of castaways and finalists have varied from season to season.
- Each type of advantage does not appear with the same frequency. Hidden immunity idols are much more common than any other advantage.
- When categorizing individuals into a “Finale Categorization”, I did not confirm whether individuals were categorized as “Jury” if they were medically evacuated post-merge, or if they incorrectly ended up in “Voted Out Pre-Jury” due to their lack of participation in final tribal council.

Conculsion

Advantages seem to help castaways remain in the competition longer, but the impact varies by type of advantage and the era in which the season occurs. Advantages may help someone win, but the evidence is not definitive.
